

ARTWORK GUIDELINES

← 3mm Bleed - All Artwork is required to have a 3mm bleed, all background elements of artwork should be extended to this point (bleed is still required if the background is white). Bleed ensures that no unprinted edges occur in the final trimmed document.

← Trimmed Edge of Document - All Artwork should be the exact size of the finished document plus the added 3mm Bleed.

← Safe Area - All text should be within this area, to prevent it being too close to the edge and getting trimmed off in the cutting process.

300dpi - All Artwork must have a minimum resolution of 300dpi.

CMYK - All Artwork must be supplied in CMYK colour mode with no spot colours, layers, etc.

PDF - All Artwork preferred in pdf format, for some jobs JPEG and TIFF files can be accepted (the size of these should be the document size plus 3mm bleed on each edge)

If there is anything you are unsure of, or you have any queries, please contact us on 01706 81 81 63 or email us at info@creativegraphicsuk.com

Background colours extend
3mm into the bleed area

Background images extend
3mm into the bleed area

PRINT SIZES

Standard Sizes - All sizes shown below are standard paper sizes (without bleed). If you would like bespoke sizes let us know and we would be happy to provide these.

If there is anything you are unsure of, or you have any queries, please contact us on 01706 81 81 63 or email us at info@creativegraphicsuk.com
